

Career Value Index Framework

Purpose

The Career Value Index (CVI) is a framework developed for Career Compass AI to evaluate professions based on their long-term value, market demand, complexity, and resilience to technological disruption.

Evaluation Factors

1. Knowledge Exclusivity

Measures how difficult the profession's knowledge base is to acquire and master.

2. Complexity of Application

Measures how difficult it is to apply knowledge in real-world situations.

3. Market Scarcity

Measures the availability of qualified professionals in the labour market.

4. Consequence of Error

Measures the impact of mistakes on safety, finances, operations, or society.

5. Accountability

Measures the degree of responsibility carried by professionals in the role.

6. Economic Leverage

Measures the value created by a professional through their work.

7. AI Resistance

Measures how difficult it is for artificial intelligence to replace the profession.

8. Technology Durability

Measures the likelihood that the profession will remain relevant over the next 10–20 years.

9. Human Judgment Requirement

Measures the importance of human decision-making under uncertainty.

10. Global Portability

Measures how transferable the profession is across countries and industries.

Scoring Scale

1 = Very Low

2 = Low

3 = Moderate

4 = High

5 = Very High

Career Value Bands

90–100 = Exceptional Career Value

80–89 = Very High Career Value

70–79 = High Career Value

60–69 = Moderate Career Value

Below 60 = Limited Long-Term Value
